

# Svecom Shafts

For over 60 years, Svecom PE has been manufacturing innovative and highly customisable systems for the winding and unwinding of reels in the Converting, Corrugating, Paper and Tissue industries. The company has been represented in the UK by Jarshire Ltd since 1979.

The Svecom range includes shafts of various body materials each designed to optimise shaft body weight to reel weight. These include aluminium profiles, aluminium plus carbon fibre, and steel. The large expansion range ensures ease of shaft insertion and withdrawal, high torque transmission with no reel slip.

- Highly customisable range for the winding and unwinding of reels
- Various body materials designed to optimise body weight to reel weight including aluminium profiles, aluminium plus carbon fibre, and steel
- Large expansion range ensures ease of insertion and high torque transmission with no reel slip
- All air shafts can be repaired quickly with “return to base” service

# The Svecom Range

– meeting the need

**Model 650/PLF**

## Differential shaft

Designed to wind materials with different width cores and very low tension

**Model 636/MS**

## Mechanical expanding shaft with leafs

Recommended for winding and rewinding rolls with and without cores

**Model 635/MK**

## Mechanical expanding shaft with lugs

Unwinds rolls with cores and can be used when core width greater than 500mm

**Model 639/PS**

## Pneumatic expanding shafts with leafs

For winding and rewinding with and without cores, also with multi-slits and for narrow web

**Model 640/PL**

**Model 641/PR**

## Pneumatic expanding shafts with ledges

**640/PL** for all types of cores, multiple rolls and larger diameters  
**641/PR** for unwinding or rewinding of plastic that should not be stretched

**Model 638/PK**

## Pneumatic expanding shaft with lugs

Primarily for unwinding rolls with cores, can be used when core width is greater than 500mm

**Model 642/PM**

## Pneumatic slitter/scorer shaft

Recommended as a drive shaft for slitter, scorer or slotter heads - representing an alternative to traditional non-expanding drive shaft

**Model 640/PQL**

## Pneumatic self-expanding shaft with ledges

Provides perfect unwind and rewind at higher linear speeds, including for use with jumbo reels of tissue and paper

**Model 639/PSC**

## Pneumatic-mechanical expanding shaft with leafs

For unwinding and rewinding rolls with or without cores – can be used with multi-slits and very narrow web widths
